SUMMARY

Computer Science graduate (Cum Laude) experienced in building and deploying responsive, serverless web applications using React, TypeScript, Tailwind CSS, and Firebase. Seeking an entry-level Web Developer role where I can contribute to real-world projects, receive mentorship, and grow my career long-term.

KEY SKILLS

Python, JavaScript, TypeScript, React, Vite, Tailwind CSS, Flask, Node.js, REST APIs, Firebase, Firestore, SQLite, SQL, Pandas, NumPy, Scikit-learn, UMAP, K-Means, n8n, and Git.

EXPERIENCE

Internship, Department of Migrant Workers - DMW **Feb 2026 - May 2026**

- Architected and deployed a standalone, local-network Paperless Queuing System using SQLite, streamlining real-time client routing between DMW and OWWA offices and eliminating manual queue tracking.
- Processed and consolidated large-scale demographic datasets into structured, highly organized spreadsheets, meaningfully improving record accuracy and staff access efficiency.

TECHNICAL PROJECTS

Queue Management System **Feb 2026**

Role: *Solo Developer*

Tech Stack: *React, TypeScript, Vite, Tailwind CSS, Lucide React, Firebase Firestore, Firebase Authentication, Firebase Hosting, React Router DOM*

- Architected and deployed a real-time paperless queuing system using Firebase Firestore, instantly syncing the public TV board the moment an officer calls a client, removing lag from manual number-calling.
- Implemented Firebase Authentication and role-based routing with React Router DOM to securely separate access between admins, officers (DMW/OWWA), and the public kiosk/TV board.
- Built a fully responsive, dark-mode UI with Tailwind CSS and Lucide React, eliminating manual paper handling and reducing physical wait times for clients.

K-UMAP Health Analytics **Dec 2025**

https://k-umap.onrender.com

Role: *Solo Developer / Data Analyst*

Tech Stack: *Python, Flask, Flask-CORS, Gunicorn, NumPy, Pandas, Scikit-Learn, UMAP-learn, SciPy, Optuna, Joblib*

- Built a dimensionality-reduction and clustering pipeline (UMAP + K-Means) to analyze student clinical health datasets at Isabela State University Echague Infirmary, meaningfully optimizing cluster separation with Optuna.
- Deployed the pipeline as a Flask REST API on Gunicorn with a CORS-enabled backend, delivering actionable, data-driven insights for campus health administration.

J.P. Lamug-Daquioag OB-GYNE Clinic Website **Aug 2026**

https://j-p-lamug-daquioag.vercel.app

Role: *Solo Developer*

Tech Stack: *TypeScript, HTML, API, Chatbot*

- Designed, developed, and deployed the official clinic website for J.P. Lamug-Daquioag OB-GYNE Clinic, establishing its first online presence.
- Integrated an API-driven chatbot to support patient inquiries and improve engagement.
- Expanded reach for the clinic's healthcare services in San Agustin, Isabela through a fast, mobile-friendly TypeScript build.

Stock Market News Intelligence Analyzer **Aug 2026**

Role: *Solo Developer / Automation Engineer*

Tech Stack: *n8n, Google Gemini (AI/LLM), RSS Feeds, REST APIs, JSON, Discord Webhooks, Cron/Scheduled Triggers, JavaScript*

- Built an automated financial-news monitoring pipeline in n8n, consolidating stock-market news from multiple RSS and REST API sources on a scheduled cron trigger.
- Applied Google Gemini (AI/LLM) to analyze and filter incoming stories, delivering real-time, formatted insights to Discord via webhook and eliminating the need to manually monitor news sources throughout the day.

EDUCATION

Bachelor of Science in Computer Science (Major in Data Mining) **Aug 2022 - Jul 2026**

Isabela State University - Echague Main Campus

- Final GWA: 1.518 — Cum Laude

CERTIFICATIONS

Certificate of Eligibility — Honor Graduate (Cum Laude), PD-907 **Jul 2026**

Certificate of Completion — Accenture Technology Academy (Salesforce) **Feb 2026 - Apr 2026**

Civil Service Eligible — Professional **Mar 2024**
